# Protective Measures To Shield Your Business From **Phishing Attacks**

Phishing attacks aim to exploit your most valuable asset—your employees. Implementing simple proactive measures can keep them safe and ultimately secure your business.

---

## **EMAIL SAFETY**

Set up email filters and monitoring tools to reduce the risk of phishing emails reaching your inbox.

## **EMPLOYEE TRAINING**

Empower your employees by teaching them how to spot scams and avoid clicking on dangerous links.

## **ACCESS CONTROLS**

Not every employee needs access to everything. Set protocols to limit what people can access based on their job roles.

## **INCIDENT RESPONSE PLAN**

Things will inevitably go wrong, but having a response plan in place will reduce panic and help you recover faster.

## **MULTI-FACTOR AUTHENTICATION**

Adding an extra layer of security verification will make things considerably harder for attackers.

## **SECURITY REVIEWS**

Periodically reviewing your systems ensures everything is working and fixes issues before they're exploited.
